

July 10 – Meeting

Display is looking like the paper mock-up

Sort is using the creation date to sort it

- Will be changing the sort to work for the average ranking

If unable to fix the problem we will have to make a creative solution

Set some priorities for the last two sprints

Make a planning document to see everything that was originally discussed and see what was accomplished and see what is not. Discuss documents the risks that we see and what we are running into problems

- Discuss options and see what would be most effective for the site

After the project there would be a beta release for the project

Planning Document Draft by Monday – email it to all the participants for the next sprint meeting

Post screenshots onto Slack

Dial up information -> just in case connectivity issues occur

- using numbers for the password instead of letters

July 17 – Check-in Meeting

Progress:

Normalizing the database

- deleting the Votes table as the table is no longer in use as we are now using the Ratings table

Finishing the implementation of the champion button

- we are now adding the sponsor button to change the idea state

Roadblocks:

Session info is not saving properly due to CORS

- Would need Sierra System's help with this issue

Frontend is having issues of sending data to the server

- We are currently researching on this issue

July 3, 2020

Working on Bar Graph, Database, and Changing the UI to Nic's paper mock-up

Make a list for questions or feedback for the Monday meetings

Define that city area it would be great for people to register with their city area –
Victoria, Esquimalt, Vancouver, etc

Backlog - Pick a city and smaller groups would be created from the cities,
currently focused on the display

Like or dislike would now be changed to star rating and averaging those stars
rating which would give more details

Send screenshots to Nic for feedback before the Monday meeting
